

uni DTB in Boseler Goldschmaus

The Superior Deboning and Trimming Belt

The Company Boseler Goldschmaus

The company is based in Germany and their slogan is *"Together we are stronger"*. Boseler Goldschmaus was established in line with this principle in 1988, when nearly three dozen farmers from the Bösel region founded a producer association. At that time they were butchering nearly 35.000 hog half a year. The producer association then developed in a mid-size business which quickly established itself in the market. Today, the Goldschmaus Gruppe slaughters and processes 35.0000 hog and 2.000 cattle per week.

At the location Oldenburg in a slaughter processing unit, 4 dedicated slaughter lines are used to fill the quantity of beef.

Testimonial

«Oldenburg beef processing plant operated with several different plastic modular belts. Some of their cutting lines kept breaking down on heavy meat parts hitting the belt, causing the belt's hinge and edges to break. Also, parts of the competitor belts were difficult to clean. The lifetime of the belt, reduced by deep cuts in the belt, threatened the regular base of investment.

Due to the above-described defects and in order to limit Boseler Goldschmaus maintenance costs, Ammeraal Beltech Germany convinced the customer to use the new dedicated deboning and trimming belt, uni DTB made of Polyketone.

We have been using uni DTB belt for more than 12 months now, and still no belt exchange was needed. We don't have breakage, thanks to the robust design and heavy-duty edges. The change from the competitor's belt was easy, with no need to change sprockets, really plug and play. Surprisingly, after six months of operation, the cuts on the belt are less apparent compared to those on Acetal material.

Last but not least, the pricing of uni DTB is incredibly interesting.»
