

Revolutionizing Conveyor Efficiency with Ultrascreen Pro: A Hygienic Solution for Enhanced Performance

Naddeo company

Since 1987, Naddeo has specialized in designing innovative solutions for fresh-cut produce, offering advanced machines and systems to process ready-to-eat vegetables. With nearly forty years of expertise, Naddeo has become a trusted leader in the sector, providing comprehensive, tailor-made services—from meticulous design and installation to dedicated assistance. Driven by continuous research, forward-looking technologies, and a commitment to sustainability, Naddeo delivers exceptional machinery for every stage of processing: loading, sorting, trimming, peeling, cutting, washing, drying, and mixing.

Testimonial

“We aimed to significantly boost the efficiency and hygienic standards of our machinery by introducing gooseneck conveyors with a specialized design, addressing common operational challenges like belt tensioning, tracking, and cleaning issues” - explains Antonio Naddeo.

“Working closely with Ammeraal, we adopted the Ultrascreen Pro positive drive belt over modular plastic. This belt provided immediate and noticeable improvements. The Ultrascreen Pro is designed to be self-tracking and operates without tension, eliminating one of the major hurdles in conveyor maintenance. Furthermore, the belt’s hygienic lugs enhance cleanliness, making it easy to sanitize and maintain even in environments with strict hygiene requirements.

The lightweight frame of the Ultrascreen Pro, coupled with its various mesh sizes, allows it to handle a wide range of applications. Whether it’s washing, dewatering, drying, or weighing, the Ultrascreen Pro adapts seamlessly, delivering consistent performance and lower Total Cost of Ownership.

This belt has quickly become an indispensable part of our machinery, aligning perfectly with our commitment to provide our customers with reliable, efficient and safe machineries.”
